

## Verclin

Verclin is a product to be applied on glass. The mixture perfectly gauged of Dioxide of Titanium and Nitrate of Sodium as well as a particular and precise technique of production allows to obtain a product which is used on external surfaces and guarantees not only its functions of photocatalyst as a non-pollutant, antibacterial but also lowers the most important urban pollutants, such as NOx - SOx - VOC, moulds.

At the same time superhydrophile and oxidizing, this product allows to have permanent clean glass panels with the help of the rain.
